

## IMAGINE RIT STUDENT POSTS

### Student innovations, projects kept many families fascinated

Imagine RIT has had nearly 140,000 visitors since its inception six years ago, and another crowd of about 30,000 was attracted to campus this year with exhibits that brought out many families.

There was the eWaft exhibit, a ripeness detection system for packaged fruit; Robochimes, a set of mechanical chimes; and the Levitation Clock, which uses something called magnetic levitation to tell time.

Many nutrition exhibits also attracted families, like the Food Fun Fact Jeopardy that tested visitors' knowledge of food made in New York and more. The game was designed to help young children learn to eat healthy, said Raj Wellington, an exhibitor and business major.

Both children and adults seemed fascinated with the technological and scientific marvels created by students.
